

## PRUSIK CORD & LOAD RELEASE HITCH CORD

The most important attributes of a cord used for Prusik hitches are consistency in handling, diameter and strength. Once you have determined the Prusik hitch that works best on your host rope, you want the same performance every time you replace it. CMC Prusik Cord has the right balance of suppleness for reliable activation, but is not so soft that it wears out rapidly. Made of 100% nylon with a torque-free, kernmantle construction, it comes in solid colors to help differentiate between cords designed for Prusik hitches and climber's accessory cords. Two color choices allow you to use a separate color for each length Prusik in a Tandem Prusik Belay System. The 9-mm cord is the size preferred by rescuers who use cord for a Load-Releasing Hitch.

Cord is sold by the foot. Please see the table below for maximum lengths available for order.
