

SKED® STRETCHER FLOTATION SYSTEM

The flotation system for the Sked Stretcher maintains the patient in a nearly vertical position. It is designed so that a patient in the water can be loaded into the stretcher. Self-righting, it will keep the patient's head above water even in rough seas. The Flotation System fits both full-size and pediatric Sked Stretcher models.

Additional Skedco Products

If this Skedco product does not fit your needs, CMC carries others that may. Other Skedco products CMC has offered are the SKED-EVAC Industrial Tripod, Sked Tripod Winch Bracket, Skedco Oregon Spine Splint II, Half-Sked Patient Drag, HMH Sked Stretcher, Sked Basic Rescue System with or without Cobra Buckles and the SKED-EVAC Aluminum Cobra Buckle Conversion Kit itself. Skedco's aircraft-grade aluminum SKED Tripod and Skedco's plastic stretcher, litter products can be utilized in many technical rope rescue and industrial rope access operations in confined space, search and rescue (SAR), fire rescue, air operations, swiftwater, urban rescue (USAR) and work at height.
