

A soft anchor system designed to create anchor points from tree branches or around horizontal man-made structures. The strap has been designed to both hold up to the rigors of tree work and protect the tree.

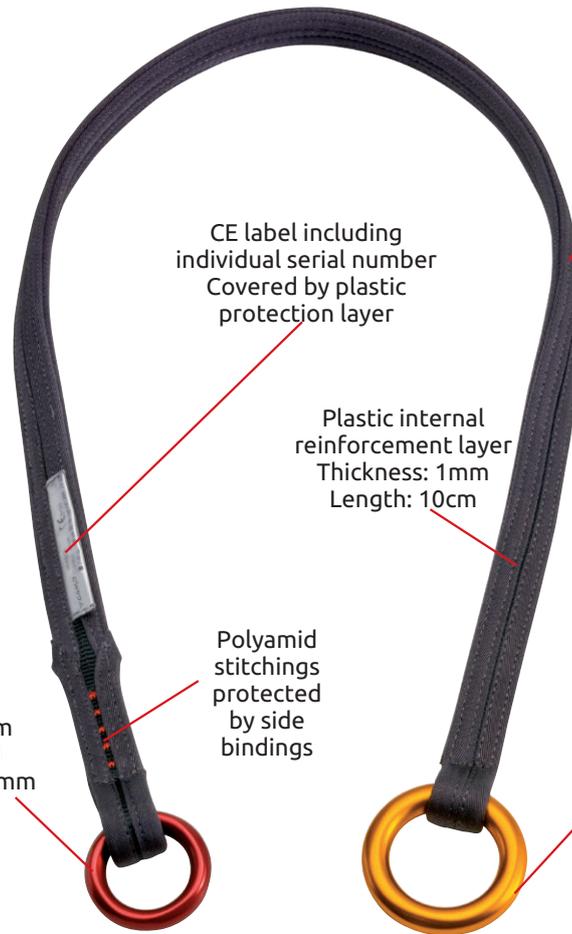

Other features include the color-coded anodized end rings that are different sizes to help with installation and removal from the ground when used with a length of cord and the Herbol Ball (ref.2141).

- 214001 90 cm
- 214002 120 cm
- 214003 150 cm

HERBOL BALL

2141

Ball for cambium saver.

Double-layer polyester webbing with double side bindings for best stiffness and wear-and-tear resistance
Width: 23mm
